

# Help us find ways to Prevent Liver Cancer

Only **18 out of every 100 people** will live more than 5 years after being diagnosed with liver cancer, and there are currently no preventive medications for liver cancer.

A green tea extract called **Polyphenon E®** may reduce the changes in the liver which lead to cancer.

## Our Study

Participants will take different doses of a green tea pill called Polyphenon E® to see whether it can decrease changes in the liver which increase the risk of liver cancer.

## Join Us!

If you qualify, you may be reimbursed up to \$1,200 for your participation, your time, and extra expenses (child care, travel, absence from work, etc.).

**If you are living with liver cirrhosis, you may be eligible to participate!**
